It's a Communication's revolution.

Over the past few years in the communications industry, technology has been accelerating at a steady pace. Today we can virtually call or talk to anybody in the world who has a cell phone, land line or computer. Until recently the cost associated with talking to people around the world was quite high.

In the traditional PSTN system there were many links or hops the call had to make, and each carrier wanted their piece of the pie, which increased call costs. With the wide acceptance of the internet, many people are now able to communicate around the world at significantly reduced costs via the VOIP system.

VOIP or voice over internet protocol is the new way to communicate, we can jump on our laptops or home computers and as long as the other person is on their computer we can connect with them generally for free. The VOIP system has been in use for quite some time now and is beginning to make inroads into the cellular market.

There are some problems with the VOIP system as it currently stands these include:

Computer hardware is required to connect to the system

The other person needs to be connected as well

Can not be used from a landline, and

Must have internet connection.

For many people these problems can be circumvented, however one company

FDIConnect have come up with solutions for all the problems listed above. Right now there is technology which allows a person to connect to the voip system without requiring a computer, can be used from a land line, and there is a way to connect without a landline.

FDIConnect have produced a range of products which allow a user to control the way they spend their money on communication cost. in many cases saving up to 90% on their call costs. To be able to do this FDIConnect use's products that access the VOIP network, from your cell phone, landline or computer. Here are some examples

The Widget (great name)

JUST PLUG IT INTO ANY 1 Or 2 LINE PHONE. For home, hotel, cottage, dorm etc. and save up to 80% on your local and long distance calls. No Internet, No Computer, No broadband, just a phone!

Gicell Phone

Portable Voip service you can take with you anywhere in the world and make and receive calls via WiFi or GPRS. Includes generic USA phone number and FREE incoming calls.

Also works as an unlocked tri-band GSM International phone. (900/1800/1900)

Trinet

Includes USA phone number or keep your existing number

Activate all your home phones with your current cellular (GSM) service

Eliminate all your incoming call costs with your existing GSM service

Make unlimited calls to USA and Canada and from 2 to 44 countries utilizing your current GSM service

Enables you to call anywhere in the world using your cell phone or your home phone at Voip rates

Call forward your cell phone number to any number in the world at Voip rates

Call from anywhere in the world back to the USA with your US cell service with no roaming charges

Calling from your cell to cell anywhere in the world at ZERO cost within our network technology

Provides you with 3-4 independent phone lines for the cost of one

TriNet will convert any existing phone network to Voip without changing equipment,integrates with any PBX (Private Branch Exchange)

These systems will allow individuals to reduce their communications costs dramatically, I have been using the system now for just over a month now and i can unequivocally state that the system has reduced my bill by %90 infact I am being paid, which I find really nice. Not many telco's will pay you to use the system and all i did was refer some friends to use the system.

How does it work, how do you make free calls.

This is what I did to make calls from my cell phone.

First i joined and made an account and deposited \$20 into my account.

Then I went an bought the cheapest sim card I could find, which was \$20 for a year.

Then I logged into my FDIconnect customer account and created my trigger number.

Then i dialed the trigger number, waited two rings and hung up

within 30 seconds my phone would ring and i can make my call as per normal.

What is a trigger number.

A trigger number is a special number you set up within your account that you can call. When you call this number and hang up after two rings, the system knows that you want to make a call and will ring you back, (no cost to you) then you can make your call. Essentially what this does is remove call time from your cell phone carrier, which eliminates calls costs in this area.

To make free calls

You can make free calls with this system by joining as a customer and having the people you call the most join as a customers as well. The calls are free because all calls within the network are free.

Note to all readers

I am a reseller for FDConnect, I write this article from a biased viewpoint. The system works for me, I have dramatically reduced my call costs down from \$400 per month to just over \$30 per month. FDConnect also pays me for refering others to use the system and will also pay others to refer the system as well. I dont know of many telco's that will do that. I invite you to have a look, there are now credit checks or contracts, you can come and go as you please

FDConnect
